

NEXT STEPS I:

Pilot Monitoring Study,
with multiple end users

Final Stakeholder Conference, May 2021

The Concept

To pilot, with national water agencies, the deployment of DGTs alongside the traditional methods that they are currently using for their reporting the chemical status of national water bodies.

The pilot scheme will assess, side by side with currently used methods, the relative:

- ease of use of passive samplers;
- feasibility of incorporating passive samplers into monitoring strategies;
- benefits of incorporating passive samplers into monitoring strategies.

The Monitool Contribution

We will support the assessment by:

- participating as an expert group to complement this Pilot Monitoring Assessment with the aforementioned national water agencies.
- including all our MONITOOL results – EQS values and formulas – in the pilot study.

Decisions

What national water bodies would like to be involved?

What specific case studies would you like to include in the pilot?

What type of pilot assessment would you like to carry out?

- surveillance (annual monitoring of water bodies)?
- operative ?
- investigative monitoring (chronic contaminated specific water bodies, for specific contaminants)?

Next steps:

If you would like to be involved, please email

monitool@monitoolproject.eu

And indicate "Pilot Monitoring Assessment" in the subject line
